

Where are we going?

The trip will take in a huge number of interesting points and places including:

- **The COP21 Conference Paris**
195 countries from across the globe will come together in Paris, where they are expected to sign a legally binding declaration to tackle climate change and global warming - the first declaration of its kind in history.
- **The Pyramids at Giza**
Around 4,200 years ago it is thought that a drought killed off ancient Egyptian pyramid builders.
- **Rwenzori Mountains**
Here in the Rwenzori remain a few of Africa's last glaciers; they are expected to be gone in two decades.
- **Mount Kilimanjaro**
The glacier at the top of Mount Kilimanjaro is diminishing, due to climate change and deforestation.
- **Victoria Falls**
The waterfall is under threat as water levels decrease and temperatures increase.
- **Boulder Penguin Colony**
A unique land based colony of African penguins whose numbers are decreasing as a result of climate change.
- **Visiting renewable energy projects throughout Europe and Africa**
Solar cycling lanes in Amsterdam, wind farms in Egypt, solar lighting projects in South Sudan, biogas projects in Ethiopia and solar energy projects across South Africa.

We'll be recording our visits by photo and video, sponsors will have access to our recordings and will have the opportunity to use specific images for marketing and promotion purposes
